

## DOORS DETERIORATING?

When improving your crawlspace, the first place to start is at the access door.

### **VaporGuard Access Door**

Does hot, humid air infiltrate your crawlspace in the summer? Does cold air get in the winter and make your floors cold? Protect your crawlspace from unwanted air and pesky intruders with the USS “VaporGuard” access door.

If you have a metal door, it may be bent, ill fitted and rusting. In addition to being an eyesore, these doors allow outside air, insects and rodents to enter the crawl, and ruin measures you’ve taken to prevent moisture from entering your home.

In many cases, the opening is just a piece of porous plywood cut to fit the opening. Some doors might be hinged and have a latch. The USS **VaporGuard** Access Door system replaces and improves these openings.

USS will cut the panel to fit your opening, It comes with heavy duty wing bolts and anchors that make it easy to get access to the crawlspace.

*Our doors are custom made out of ½” thick recycled plastic. It is 100% waterproof and does not support mold, mildew or bacteria growth.*

*Each door has 1” wide weather stripping attached to the back to insure a tight air seal between the door and the home.*

*An access well can be installed, if any part of the door is below grade.*
